DESCRIPTION

Our SD Platinum System is a multi-two-layer waterproofing system consisting of two membranes: for below grade line: our SureDry 6000 and for above grade line: our SureDry 6850. This system pairs with our SureDry 2-1/2 PolyInsulDrain Board and our SureStripDrain (pipe and stone substitute) foundation drain. The SD Platinum System is our top tier system making residential foundations impenetrable to water and any acute weather conditions, while still being economically sensible for residential applications. Our SureDry 6000 provides our most rugged membrane for below grade line application. Our SureDry 6850 provides U.V. stable waterproofing for the above grade line membrane application. These 2 membranes in unison guarantee full coverage waterproofing protection against any and all water intrusions. Paired with our SureDry 2-1/2 PolyInsulDrain Board, it will relieve the hydrostatic pressures, protect the membrane, and give you max drainage of water across the it's entire surface with our SureStripDrain (pipe and stone substitute) assisting in the process. Our SureDry PolyInsulDrain Board in 3-5/8th is also available for this system. See our individual data sheets for more information.

SYSTEM PRODUCT BREAKDOWN

Spray applied SureDry 6000 at 60 – mils wet for below grade line

Spray applied SureDry 6850 at 60 – mils wet for above grade line

2-1/2 SureDry PolyInsulDrain Board: R-Value: 10.0 /// 240 GPH

Available: 3-5/8th SureDry PolyInsulDrain Board: R-Value: 15.0 /// 340GPH

SureStripDrain (Pipe and Stone substitute)

#89 Mastic to be used to fill voids, tie holds, seam edges, overlaps, and penetration points.

WARRANTY

This system comes with a limited lifetime warranty.
