DESCRIPTION

Our SD Silver System is a two-layer waterproofing system consisting of SureDry 4000 membrane, our 1-1/4th SureDry PolyInsulDrain Board and our SureStripDrain (substitute pipe and stone) foundation drain. The SD Silver System is our standard one system fits all waterproofing system. It's true grit will hold its own in extreme weather conditions, yet not break the bank in doing so. SureDry 4000 membrane provides full coverage waterproofing protection against water intrusions and our SureDry PolyInsulDrain Board relieves hydrostatic pressures, protects the membrane, and drains water across its entire surface, with our SureStripDrain (pipe and stone substitute) assisting in the water removal process. See our individual data sheets for more information.

SYSTEM PRODUCT BREAKDOWN

Spray applied SureDry 4000 Waterproofing Membrane at 60 - mils wet

1-1/4th SureDry PolyInsulDrain Board: R-Value: 5.0 /// 120 GPH
